	9•	Reason for the excellent level of instruction was the fact that graduates of the Peking Union Medical College received a subsequent three years experience in staff training at PUMC and after serving as chief residents were sent to the US for an additional one year's training.						
	10.	All departments at FUMC were famous for the quality of work done and the college is undoubtedly the best in Asia. Its training placed greatest emphasis on training teachers.						
	11.	FUMC also had a nursing school and students were all college graduates. The classes were small and very select because of this reason but the nurses received wonderful training. Most of them had gone to Mission Schools.						
50X1	12.	Training at National Kweiyang Medical College placed emphasis on public health, and the emphasis in medical training in China is still on public health medical students are being trained on a mass production basis and the training they receive is reportedly very low.						
50X1	13.	at National Kweiyang Medical College where there used to be an average of 30 students per class, there are now three hundred students per class. Training which used to last six years has been cut to three. Graduates are assigned to work in rural areas.						
50X1 50X1	14.	While most of the equipment in pathological training was from 50X1 the US considerable equipment is now coming into China from Germany /Soviet Zone/. US equipment was always considered good, but the German equipment is probably the world's best.
